

Jayadeep Sayani

Victoria, BC, Canada | jayadeeps1101@gmail.com | 250-880-9270 | Portfolio | LinkedIn | GitHub

Education

University of Victoria, BSc in Computer Science and Mathematics (3.7 GPA) Sept. 2024 – Apr. 2028

Skills

Languages: Java, Python, HTML/CSS, JavaScript, SQL, JSON, C# (Working Knowledge)

Libraries / Frameworks: React, Node.js, PrismaORM, Express, Flask, Langchain, ShadCN, Firebase, JUnit

Technologies: Git, GitHub, VS Code, Eclipse, Bash (Linux), Godot Game Engine, REST APIs

Work Experience

Software Developer Contractor May 2026 – Present
CareLife – Remote, Canada

- Designing and developing an RSSI-based wander alert system using **BLE beacons**, **IoT gateways**, and **MQTT** telemetry to support real-time resident safety monitoring.
- Developing a **Python** monitoring service utilizing **NumPy** and **datetime**-based event analysis to process real-time gateway telemetry, track beacon communication patterns, and detect potential wander events.
- Conducting performance testing in both high-density and low-density **BLE** environments to evaluate packet loss, signal reliability, and system effectiveness under real-world deployment conditions.

Full Stack Developer Intern May 2025 – Aug. 2025
CareLife – Remote, Canada

- Developed responsive web pages for the Care Life Portal using **Angular** and Ionic, enhancing client need tracking and user accessibility.
- Developed along with the backend team to create a **JavaScript** automation tool using **REST APIs** and file system operations to monitor 200+ fall detection cameras, which improved real-time incident tracking and reduced manual monitoring efforts.

Projects

ScholarLog | Python, SQL, Node.js, React, Typescript GitHub Repo

- Built a GPA tracking web platform used by **300+ students**, allowing users to calculate semester and overall GPAs across multiple courses.
- Developed a **React + Node.js structure** with a PostgreSQL database, designing SQL schemas to manage user accounts, course records, and GPA calculations.
- Designed a **10+ page interface using TailwindCSS and ShadCN**, enabling fast navigation between semester records and GPA analytics.
- Implemented application logic using **TypeScript** to improve type safety across the codebase.

Leadership

UVic Engineering & Computer Science Student Society (ECSS) | Multiple Roles Sept. 2024 – Present

- Leading the development of the ECSS website, designing and implementing a modern online platform for engineering and computer science students.
- Organized a student hackathon and industry networking event by coordinating with corporate sponsors, volunteers, and executive members.
- Led an outreach event at a local high school, introducing students to engineering and computer science through interactive presentations and activities
- Evaluated funding proposals and collaborated with the executive team to allocate funding among student clubs.

Hackathons

TECHNATION X Telus AI for Innovation Hackathon - 3rd Place / 184 Teams January 2026
